

# HexClad Cookware

HexClad Cookware is a brand of [hybrid cookware that combines the benefits of stainless steel, non-stick, and cast iron pans](#). The cookware is known for its high performance, easy clean-up, and durability. According to the manufacturer, the [HexClad pans are metal utensils safe](#) and tough enough for everyday use while requiring minimal maintenance.

The patented HexClad technology revolves around a design that features a [unique hexagon top layer design, a middle layer of aluminum for even heating](#), and a stainless steel bottom layer. This unique combination provides the benefits of non-stick cooking with the ability to [sear and brown like stainless steel](#).

[HexClad cookware sets](#) can be purchased directly from the HexClad website or online retailers like Amazon, Costco, and Walmart. Prices vary depending on the type of cookware and the set's size, ranging between \$100 and \$700.

The products have been highly rated by various reviewing platforms, indicating customer satisfaction with the [hybrid technology's unique features and the durability of the pans](#). However, as with any product, consumers are advised to read multiple reviews and make an informed decision about the [suitability of the cookware for their individual needs](#) and preferences.

## Hexclad Cookware Reviews

HexClad Cookware has gained remarkable points for its unique mix of [non-stick convenience](#) and durability of stainless steel. Many reviewers affirmed its durability. Even with regular use and scouring, the cookware showed no discernable scratches, according to a review on Amazon. The [cookware's a sturdy feel, a heat-balancing feature](#), and good heft.

Gordon Ramsay endorsed the HexClad Pan. They asserted that it was worth the investment. Some drawbacks, such as the cookware being a bit heavy, but complimented its [non-stick surface and non-toxic cooking](#) environment.

Reviewers had specific praise for the [HexClad pan's fast heating](#) and superior performance in browning and searing. Websites like Delish noted how the [pan heated up much faster than a cast-iron one](#), leading to nicely golden-brown onions and well-crisped chicken skin.

All in all, from various domains, users found the cookware to live up to its claims of providing non-stick convenience, durability, and versatility. Every review noted the high price tag, but many felt the investment was worth it over time, resulting in an overall [positive rating for HexClad Cookware](#).

## Is HexClad made in China?

Yes, [HexClad cookware](#) is manufactured in China.

## Is HexClad scratch-proof?

Yes, [HexClad cookware is designed to be scratch-resistant](#). The company claims that its unique hexagonal laser-etched pattern provides a durable and non-stick cooking surface that is resistant to scratching.

## Does HexClad have Teflon in them?

No, [HexClad cookware does not contain Teflon](#). Teflon is a brand name for a type of non-stick coating made of polytetrafluoroethylene (PTFE), and HexClad uses a different technology for its non-stick surface.

## Is HexClad Teflon or ceramic?

[HexClad cookware is not made with Teflon or ceramic coatings](#). Instead, it uses a combination of stainless steel and a proprietary non-stick surface that is PFOA-free.

## Why does Gordon Ramsay use HexClad?

A celebrity chef, Gordon Ramsay endorses and uses [HexClad cookware because he appreciates its durability](#), non-stick properties, and even heat distribution. He has stated that HexClad pans are versatile and can handle high heat, making them suitable for professional cooking.
